Total		86	100.0		

Agreement: I am willing to occasionally help pull weeds in the planters.

Valid cases:	22	25.58%
Missing cases:	64	74.42%
Total:	86	100.00%

Do you have any ideas for planters or planting in your village?				
Category	Example	N	Percent	Percent of cases
No comment	No	5	16.13%	22.73%
More planters	We need more	3	9.68%	13.64%
Variety of plants	I think we need a great variety and quantity of plants, including more exotic species such as palm trees and cacti	2	6.45%	9.09%
Enjoy the planters	They always look amazing.	4	12.90%	18.18%
Artwork on planters	Maybe might be nice to get some artwork on the planters?	1	3.23%	4.55%
Local groups/schools sponsor or maintain some planters	Would the school or local organisations sponsor or be responsible for the care have their name or logo on.	2	6.45%	9.09%
Funding for planters	I would like plants, compost and means of watering planters/flower beds funded on an annual basis by UCTC	2	6.45%	9.09%
Winter and summer bedding	Planters are better done with winter and summer bedding.	1	3.23%	4.55%
Perennials	More perennial plants in planters	3	9.68%	13.64%
Wildflowers	Would be nice to see some wild flowers, maybe on the verges as you come in / out village	2	6.45%	9.09%
Fruit, vegetables, and herbs	Use the planters for fruit and veg	2	6.45%	9.09%
Spray for weeds more often	There are too many weeds around the villages and they should be sprayed more often.	1	3.23%	4.55%
Hattoncrook needs planters	Hattoncrook needs planters	1	3.23%	4.55%
Hanging baskets in Udney Green	I would like to see hanging baskets returned to Udney Green.	1	3.23%	4.55%
Need more volunteers to maintain planters	The planters have been v. well maintained ... by a very small number of people. this is not sustainable and needs to be addressed.	1	3.23%	4.55%
		31	100.00%	140.91%

A brief note on how to interpret the tables and graphical information above:

The statistics section at the top of each segment of question analysis shows the number of valid responses (where someone provided an answer) and the number of missing responses (where the respondent did not give an answer).

The frequency tables for each question, below the statistics table, indicate the number and percentage of respondents who chose each option.

- The **Frequency** (1) and **Percent** (2) columns in the tables indicate (1) the number of responses in each response option and (2) the percentage of respondents who chose each response option. Both columns include the missing answers for that question as part of the total response set. In short, **Frequency** is how many people gave the answer and **Percent** is the portion of people who answered the questionnaire in general that gave the answer.
- The **Valid Percent** column indicates the percentage of responses in each option out of those who did respond to the question. For example, if in a survey of 80 respondents, 70 answered Question 1 and 20 of those respondents chose Option A, the valid percent for Option A would be 28.6%, calculated by dividing the 20 given responses by the 70 valid responses to the question and ignoring the 10 missing responses. In short, **Valid Percent** is the portion of people who chose an answer out of those who answered the question.
- The **Cumulative Percent** column informs about the percent of responses that fall in multiple categories. For example, for level of agreement questions, if the cumulative percent in the 'Agree' row is 60%, it means that 60% of respondents either chose 'Agree' or the row above it, 'Agree Strongly'. In short, **Cumulative Percent** groups the valid percent of multiple answers into a larger portion out of the question respondents.

The bar and pie charts for the different results are graphical representations of the **valid percentages** of each response for a question and can be read as such.

For the frequency tables for the questions that ask for feedback in an open-response way, the answers were divided into categories, which were then used to analyse the responses and generate frequency data.

- **Valid Cases** are the number of answers given for the question and **Missing Cases** shows the number of missing answers, where nothing was written in the response space.
- The **N** (1) and **Percent** (2) columns in the tables indicate (1) the number of responses in each response option and (2) the portion out of all the given answers to a question that fall in each answer option. These are calculated using only the valid responses. In short, **N** is how many people gave the answer and **Percent** is the portion of all the given responses that fall in a category.
- The **Percent of Cases** column indicates the portion of valid cases (those who answered the question) that chose that response option. As responses can fall in multiple categories for this kind of question, the percentages of all the answers can add up to more than 100%. If 47 out of 86 respondents answered a question, the **Percent of Cases** column indicates the portion of the 47 valid respondents that gave an answer in that category. Some of those same respondents could have given an answer that also fell in other categories. In short, **Percent of Cases** is the portion of valid respondents that gave a given category of answer.
